I talked with Cecelia Watson, author of the new book "Semicolon" about how grammar Most people assume that typing a simple number range like 506-709 into Microsoft Word is straightforward, but the reality is that hidden formatting quirks often produce invisible characters, incorrect hyphen styles, or broken cross-references. The surprising truth is that a handful of settings—line spacing, field codes, and language-specific dash rules—determine whether the range looks professional in a final document or ends up with a subtle error that readers miss. In legal forms, engineering reports, and local government notices, the range 506-709 often appears as a reference to statutes, pipe diameters, or inventory codes. A misplaced dash can change the meaning entirely—506-709 (en dash) versus 506-709 (hard hyphen) conveys different typographic intent. Because Word applies smart-dash conversion based on language

settings, users who simply type the characters may unintentionally create an en dash, which can affect sorting algorithms, hyperlinks, and accessibility. Smart punctuation. The auto-replace feature swaps a straight hyphen for an en dash after a space, turning “506-709” into “506“709” without the user noticing. Hidden field codes. When the range is inserted via a field (e.g., a cross-reference), Word stores extra characters that can corrupt the visible text after a document is converted to PDF. Language-dependent rules. In U.S. English the default dash is an em dash for sentence breaks, but some regional settings treat hyphens differently, leading to inconsistent output across shared files. Open File → Options → Proofing → AutoCorrect Options and clear the “Replace hyphen with en dash” box.
